 Hypercom T7Plus terminal

T7Plus EFTPOS terminal

Business benefits

The T7Plus is an innovative EFTPOS solution with added functionality suitable for any business, no matter how simple or complex their payment requirements are.

On top of standard EFTPOS capabilities, the T7Plus offers a range of advanced features including hospitality tipping, bar tabbing and front desk accounts software. You also have the option of adding your company logo and your own personalised advertising messages on each customer receipt.

With this level of performance from such a reliable terminal, the T7Plus is perfect to meet the growing demand of value-added EFTPOS.

“The T7Plus with its hospitality features is fantastic for both our bar and restaurant business. It provides us with greater flexibility in terms of payment options for our customers.”

KEVIN WARU,
The Mount Restaurant & Bar, Auckland

Confidence in security

The T7Plus is EMV & 3DES compliant, so it meets the latest global security standards.

Increased versatility

The T7Plus has multi-merchant capability, allowing two or more merchants working in the same premises to share one EFTPOS terminal. This makes T7Plus the ideal solution for establishments such as medical centres, where practitioners have a shared administration function.

Provide better customer service

With T7Plus, you have the choice of specialised hospitality functions. The tipping function allows customers to add their gratuity at the time of payment. You can also set up bar tabs. This improves security and means you don't have to hold on to your customers' credit cards. In addition, the specialised accounts software enables hotels and other hospitality merchants to pre-authorise funds against a credit card.

Increased convenience

The T7Plus allows the EFTPOS terminal to interface directly with your Cash Register or Point of Sale system. This means the operator doesn't have to key in the EFTPOS dollar value – offering you greater convenience and speed at the pay point, as well as eliminating the risk of human error.

Software features
